

NO (Nitric Oxide) & Nytric XPX

Nytric XPX has been shown to be a natural, non-drug method of stimulating elevated levels of NO (Nitric Oxide) production in the body. This generates bigger and longer lasting pumps, also known as the "Continuous Muscle Pump". The Continuous Muscle Pump may lead to faster recovery, elevated nutrient uptake and an increase in overall athletic performance.

WARNING: Not all AAKG products are created equal!

1) Nytric XPX uses the only NIR analyzed pure L-Arginine-alpha-Ketoglutarate manufactured exclusively in the United States by its original inventor scientist Jeff Golini (back in 1992).

2) It is also the only AAKG product to utilize the same multi-patented pH-controlled delivery technology (pHCD) as Kre-Alkalyn® to ensure optimal results.

Nytric XPX has been shown to be a natural, non-drug method of stimulating elevated levels of NO (Nitric Oxide) production in the body. This generates bigger and longer lasting pumps, also known as the "Continuous Muscle Pump". The Continuous Muscle Pump may lead to faster recovery, elevated nutrient uptake and an increase in overall athletic performance.

Nitric Oxide stimulators: These 3 things kill your results BEFORE you ever crack open the lid

I've got to be honest...

If you knew what I knew about Arginine-alpha-Ketoglutarate products, you'd read every word on this page.

You see, there's no question anymore about AAKG: the stuff works.

But like just any other product that gets popular...it's getting knocked off faster than a mafia informant.

I mean, everywhere you turn, more and more of these products are popping up, each claiming they give you a "better pump"? "more vascularity"? just name it.

But in the end, I'm sure all you really want to know is this: is one really any better than another?

The answer to that question is yes. But how do you know? I mean, comparing Nitric Oxide stimulators is a lot like comparing apples to oranges.

So, that's why I'm going to show you right here exactly...

What to look for & what to look OUT for:

Results Killer #1: Using substitutes for Arginine-alpha-Ketoglutarate.

Arginine is the primary source for nitric oxide production in humans. That's why scientists refer to the end result as of this process as Arginine-Derived-Nitric-Oxide (ADNO). Therefore, enough pure Arginine must be delivered to the body for Nitric Oxide production.

Some products just use plain Alpha-Ketoglutarate, Arginine Malate, and even straight Arginine to stimulate Nitric Oxide. Now don't get me wrong. These do work to some degree.

But in the end, it's really not a matter of "science" as to why some would choose an alternative to Arginine-alpha-Ketoglutarate. The biggest reason why most companies use these alternatives is based on the simple fact that they cost less...sometimes as much as 3-4 times less.

However, the bottom line is you want Arginine bound to Alpha-Ketoglutarate (AAKG) because it provides the greatest rate of absorption.

Remember, no Arginine in the bloodstream...means no Nitric Oxide stimulation. That's why there's just no substitute for pure Arginine-alpha-Ketoglutarate. We know it's definitely worth paying a little extra for it.

Results Killer #2: Using powdered AAKG in a formula

In case you didn't already know, Nitric Oxide is only available for about 5-10 seconds in the bloodstream once it's stimulated. Therefore, the last thing you want is to slam AAKG into your system. Which is precisely what happens with a powdered form.

Another point is that AAKG is also "Hygroscopic", meaning it absorbs moisture like a sponge and will lose potency. So what's the answer to this problem?

A tablet. Unlike powders, tablets break down slower, are more stable in fluids, and retain potency. That's why so many drugs are also in tablet form.

Unfortunately, most NO products are offered in a powdered form. And many of these formulations are also based on the "kitchen sink" theory. Put enough ingredients together, and you'll have a "super" product. However, this may lead to other problems...

You see, it's usually not a good idea to mix amino acids because they can "intertwine" in the body. In fact, most amino acids work best in the body on an individual basis.

So, if you truly want your muscles to receive a surge of nutrients and oxygen that'll put you in the fast lane for growth, look for pure AAKG in tablet form.

Results Killer #3: Lack of a pH-based delivery system

Certain compounds need to be delivered in an alkaline environment and others need to be delivered in an acidic environment. AAKG is no different.

Even if a product uses pure Arginine-alpha-Ketoglutarate...and is also in tablet form, there's one more critical component it needs to maximize delivery...a pH-based delivery system.

This advanced delivery technology is based on the simple premise that the better the delivery, the less of the active ingredient you need to get the same effect.

The pharmaceutical industry knows all about this one. Their research scientists recognize that if the pH of a drug isn't precisely "dialed in", the stomach will secrete additional acid or try to neutralize it...and destroy the drug's effectiveness. That's why many drugs rely on this type of system to control and optimize their delivery.

Controlling pH across the scale is a science unto itself. And pharmaceutical-level technology like this doesn't come cheap. As you can imagine, these companies have spent billions of dollars and many years researching and perfecting it. That's why very few in the supplement industry actually understand pH delivery systems.

So don't be fooled if you suddenly see products cropping up that claim to have one. What makes it even more difficult is the fact that you must first find the right materials to build the system, let alone know how to put them together correctly.

Regardless, this type of pharmaceutical grade technology delivers its payload like nothing else can.

HOW DOES XP's NYTRIC XPX STACK UP ON PURITY, POTENCY & EFFICIENCY?

SEE FOR YOURSELF!

Nytric XPX contains only pharmaceutical grade Arginine-alpha-Ketoglutarate that's tested before, during and after manufacturing. We also independently screen each batch to guarantee it's 100% drug free.

Nytric XPX only comes in tablet form. Simply put, Nitric Oxide is the molecule responsible for giving you those massive pumps in the gym. Unfortunately, NO production only lasts a short while after your workout is over, usually about 25-35 minutes.

But with Nytric XPX, your body will pump out NO for hours. You'll keep those vein-popping pumps all day long... that's why we call it the "Continuous Muscle Pump". And thanks to its vasodilation benefits, your muscles get a surge of nutrients and oxygen that'll kick your recovery and growth into overdrive.

Besides the fact that it uses only pure Arginine-alpha-Ketoglutarate and is in tablet form, Nytric XPX also utilizes the same patented, pharmaceutical-grade pH-based delivery system (#6,399,661, #519,305) and technology as our ATP Enhancement Kre-Alkalyn® Creatine. Being pH controlled helps protect Nytric XPX? from degradation in the gastrointestinal tract, leading to a better bio-active production of ADNO (Arginine-Derived-Nitric-Oxide).

So what's the bottom line?

When you use Nytric XPX you will see and feel a difference in a matter of days. And best of all, it's perfectly legal in all professional and collegiate level sports, powerlifting and bodybuilding organizations.

There is one thing Nytric XPX doesn't have: the ridiculous price

The pure Arginine-alpha-Ketoglutarate we use doesn't come cheap. In fact, ours is the only AAKG manufactured in the U.S. - we source it directly from Rocky Mountain Chemical, located in Montana. Throw in the costs of all our testing, and we could easily charge \$100 or more for Nytric XPX.

Well, forget that. We decided to keep the overall cost within reason so more people can benefit from it. If you do some quick math, you'll see just how economical it really is...especially compared to the results you get.

Now here's where it gets really good...

We always recommend you start with 2 tablets, 3 times a day. However... thanks to its patented pH delivery system and extreme potency, many Nytric XPX users find they only need half the normal dosage...to get exactly the same results!

Smart athletes who know exactly what to look For In a nitric oxide stimulator do this... they "Make The Switch" to Nytric XPX

It's easy to "Make The Switch" right now...
