

## FAQ's

Why is XP more expensive than other supplement companies and products?

Our insane, over-the-top testing standards protect you from label fraud and "spiked" products that could end your career. Current label claim standards are way too lax... Did you know that current industry standards only require a product to be within 90% of label claims? Here's an example of what this means: A supplement's label says it has 500 mgs of Vitamin C. This means it could actually only contain 450mgs of Vitamin C (not the 500 mgs stated on the label) and still pass under the current standards. Well, forget that. All XP customers deserve much better. We demand they fall within a minimum of 2%. Period. We have easily the strictest and most thorough product testing and drug screening policy this industry has ever seen. Our ultra-high testing standards reveal & eliminate every possible money-wasting, results-killing impurity that others miss... or never even test for to begin with. Now you don't have to risk astronomical fines, losing your title, getting side-lined, or worse... being cut from the team... all because you failed a drug test after using a "spiked" product you thought was clean. We have our products independently screened for steroids and other contaminants to guarantee they are drug-free beyond a shadow of any doubt.

Who uses XP?

There are many, many pro and amateur athletes who use XP, as well as countless individuals who just want to live a healthy lifestyle.

Will I ever test positive using XP?

You deserve to know that what you are putting into your body is 100% drug-free. We have our products independently screened for steroids and other contaminants to guarantee they are drug-free beyond a shadow of any doubt.

What is Kre-Alkalyn®?

Creatine is unstable in liquids and converts to the useless byproduct creatinine, causing such documented side effects as bloating and cramping. This happens because creatine's pH level is too low. However, Kre-Alkalyn® creatine is 100% stable because of the way it's manufactured. It uses patented pH-Correct "buffering" technology that raises its pH level to 12, the critical "non-conversion" zone. Kre-Alkalyn® is the no load, no cycle, no side effect, 100% stable creatine that gives you immediate results and saves you money because you use less. In fact, most athletes only need 1-3 grams a day to achieve results equal to or better than all other unstable creatine products. Find Kre-Alkalyn® in our ATP Enhancement and Triple XL. What if I don't want to buy them from the internet?

At this time it is the only method of purchase however if you would rather talk to someone to order the product call 303-797-6019

Can I Return/Exchange A Product?

Yes! We understand how your circumstances may change or you may change your mind. As long as you return the item(s) within 90 days, unopened, and still in saleable condition, we can give you a full refund for the product(s) or exchange them for something different. Of course, we can not refund your shipping or return shipping fees. [Return Policy Page](#)
